- Self-assessment test for infection mitigation
- Help and support at hand

**Summary**

With high transmissibility and no effective vaccine or therapy, COVID-19 is now a global pandemic. Government-coordinated efforts across the globe have focused on containment and mitigation, with varying degrees of success. Countries that have maintained low COVID-19 per-capita mortality rates appear to share strategies that include early surveillance, testing, contact tracing, and strict quarantine. The scale of coordination and data management required for effective implementation of these strategies has—in most successful countries—relied on adopting digital technology and integrating it into policy and health care. This Viewpoint provides a framework for the application of digital technologies in pandemic management and response, highlighting ways in which successful countries have adopted these technologies for pandemic planning, surveillance, testing, contact tracing, quarantine, and health care.

**India's COVID-19 vaccination app to go global**

Till now around 50 countries, including Canada, Mexico, Nigeria, Panama and Uganda, have shown interest in adopting CoWIN. CoWin is easy to use and understand for all.

Over 50 countries want Indian Cowin App; PMO directs creation of open source version of the App.

**COVID-19**

Same happened with BHIM, most of the countries are just giving chits to the vaccinated people and India is giving 'Digital Certificates'. After vaccines, we are also providing the software. Pharmaceutical and IT Power of India.

If you make a first or a second degree contact with a COVID-19 positive person, Arogya Setu alerts you and gets you timely medical help. The self-assessment test also helps you in identifying possibilities of infection.
